

XAMPP imagick installa and configuration

Step 1: Install Dependencies

First, install the necessary dependencies to compile Imagick

```
# sudo apt-get install php-pear php-dev libmagickwand-dev
```

Step 2: Switch to XAMPP's PHP Binary

You need to use XAMPP's PHP version to install the Imagick extension.

```
# cd /opt/lampp/bin
```

```
# sudo ./pecl install imagick
```

Step 3: Enable Imagick in PHP

Open the php.ini file. Add the following line to enable the extension.

```
# sudo nano /opt/lampp/etc/php.ini
```

```
# extension=imagick.so
```

Step 4: Restart XAMPP

Finally, restart XAMPP to apply the changes:

```
# sudo /opt/lampp/lampp restart
```
